Young Shin Opens Third Manufacturing Plant to Meet Growing Diecutter Demand

To meet the growing demand both in the U.S. and around the globe, South Korean-based Young Shin Industries expanded into its third manufacturing facility in 2018, prompted in part by the U.S. economy's unprecedented growth and expansion. Although the rate of this momentum is anticipated to moderate in 2019, economic factors indicate a steady and sustainable growth for 2019 and beyond. In fact, forecasters anticipate that capital spending in 2019 will reach 5.1% representing yet another year of sustained capital investment at U.S. business facilities.

MAXIMIZING PROFITABILITY

One of the premier Young Shin Industries diecutters designed and manufactured at the firm's expanding factory locations in Daegu, South Korea, is the ZENITH 210 Plus Diecutter. This flatbed diecutter features contemporary technology, superior make-ready advantages, extensive safety features, automated set-up, die compatibility with existing Swiss-made equipment and an extremely low cost of ownership.

The advanced technology and reduced equipment operating costs of the Zenith 210 Plus increases our clients' productivity and accelerates profit growth. As today's run lengths continue to decrease, the ZENITH's rapid make-ready capabilities, including its integrated chase turner, can yield greater turnaround, higher efficiencies and reduced overhead – thereby, maximizing quality and profits.

INTEGRATED FEATURES

The high-speed ZENITH 210 Plus integrates sophisticated automation features, a wide range of applications, superior performance and exceptional quality including:

- Single and double wall board corrugated
- Solid substrates such as micro flute
- Litho label and single-face laminated board
- Foam core
- Plastic corrugated and paperboard down to .060 point
- 5,000 sheets per hour
- Maximum sheet size of 82.50" x 59.05" (accommodating KBA's sheet size of 81.00" x 59.05" that competitors cannot match)

Also integrated are the following:

- Scissors lift in the feed area is included
- Chase turner allowing make-ready of next job while current job is running
- Triple action stripping – male, female and pin stripping
- Blue plastic belting in the delivery area
- Feeder lead edge hold down for feeding warped board
- Bobst-compatible cutting dies
- Globally-sourced electronics including Becker, Siemens and Omron
- Utilizes standard U.S. 480V

The recent expansion at the Young Shin factories provides timely manufacturing and rapid delivery of the firm's wide range of diecutters. Client installation is accomplished by Young Shin USA's unparalleled stateside service department delivering on-site training, phone and text support, and rapid parts shipments from our parts depot in Atlanta, Georgia.

ABOUT US

Young Shin USA Limited, a wholly owned subsidiary of Young Shin Industries, provides the sales, service, parts and training for its clients located throughout North America. Headquartered in suburban Chicago, with a stateside parts depot in Atlanta, the firm oversees operations for Young Shin diecutters and German-based STOCK litho-laminating products. ■
